

## New Product Bundles from Gravitas Publications Assist Serious Students of Science

### *From SAT Tests to Science Fair Projects or High School Chemistry Prep, Gravitas Publications Helps Students Prepare*

High school students prepping for SAT tests, competing in science fairs, or studying high school chemistry can thank Gravitas Publications Inc. for providing new tools in the form of new product bundles that make it easier to understand science.

The [SAT Verbal Prep Kit Bundle](#) from Gravitas uses Biology, Physics and Chemistry Level I “Connects to Language Series” Real Science books to help students learn Latin and Greek word roots for scientific terms. Rebecca Keller, PhD, explains, “People who are efficient know the word root and can figure out the rest of the word even if they have never seen it before.” The three vocabulary builder workbooks sell for \$52.95.

The [Science Fair Project Bundle](#) includes six separate books to help launch focused experiments and sells for \$117.95. The texts, which include teacher’s manuals and laboratory workbooks, are written by Dr. Keller, who served seven year as science fair judge chairman for the State of New Mexico.

A third bundle, [High School Chemistry](#), is labeled a prep course for High School Chemistry and includes five books for \$147.75. The most notable feature of the Gravitas prep course is the addition of a critical thinking component to help the student create a critical thinking lens so he/she can begin evaluating data for himself/herself.

Gravitas Publications Inc. produces educational materials that provide a framework for understanding science with Real Science-4-Kids (RS4K), a textbook series for elementary and mid-school students, and Kogs-4-Kids, a cross-curricular module that connects science to other subjects. RS4K and Kogs-4-Kids are written and published by Rebecca W. Keller, PhD. For more information go to <http://www.gravitaspublications.com>.
